Every Calling is Great, When Greatly Pursued.

OLIVER WENDELL HOLMES

At Diamond, the calling to design and manufacture the world's highest-performing roller chain is greatly pursued every day by teams of passionate technical experts who have made your success their life's work. It's that intensity of focus that some of the world's greatest inventors trusted to provide the drive chains they needed to transform the world. From the Wright Brothers, to Henry Ford, to the global leaders of our time, Diamond® chain is the roller chain most trusted to perform, when performance matters most.

Founded on December 24, 1890, Diamond is one of the most experienced roller chain manufacturers in the world. Driven by the principles of unrivaled experience, unsurpassed quality, and unparalleled performance, the diamond was adopted as the company's trade mark as it symbolizes perfection and acts as a constant reminder of the company's core values.

Today, Diamond sets the standard for high performance roller chain with industry leading wear life, warranty, and product selection. From industry launch to industry leader, Diamond chain is the most trusted roller chain when performance matters most.

CORROSION AND MOISTURE RESISTANT ROLLER CHAIN

In addition to Diamond Chain's full assortment of carbon steel roller chain, special chain substrates and finishes are available for humid and corrosive manufacturing environments and those locations that require frequent wash downs.

For corrosion or moisture resistant needs, consider Diamond series nickel-plated, ACE® (anti-corrosion exterior), and stainless steel chain product solutions or Sapphire series nickel-plated, Rust-Buster, and stainless steel chains.

NICKEL-PLATED CHAIN

For humid work environments, or environments where the chain will be regularly exposed to moisture, consider Diamond Chain's nickel-plated roller chains available in both the Diamond and Sapphire product series. Diamond's electro-less plating process virtually eliminates the potential for stress cracking by ensuring complete and consistent coverage of component parts for superior protection against internal red oxidation.

Diamond's rust resistant roller chains have the same power transmitting capabilities of carbon steel chain.

DIAMOND ACE®

Diamond Chain's ACE® product is ideal for environments that require additional moisture and corrosion protection versus standard nickel-plated product. The ACE protective coating, a specially formulated zinc-nickel alloy and non-hexavalent chromium coating, in combination with a specialized lubricant provide multiple levels of protection for the base metal, ensuring maximum resistance to red oxidation.

Diamond ACE (anti-corrosion exterior) roller chain offers both high strength and high horsepower transmitting capacity, along with superior wear life.

STAINLESS STEEL CHAIN

When applications require frequent wash downs or are regularly exposed to caustic cleaning solutions, Diamond Chain recommends stainless steel roller chain. Available in both Diamond AP series, 300 series, 400 series, and 600 series stainless steel or Sapphire 300 series stainless steel. Diamond offers an infinite variety of substrates and attachments.

SAPPHIRE RUST-BUSTER

Ideal for both humid and corrosive environments, the Sapphire Rust-Buster series features a nickel-plating with an additional sacrificial surface coating to resist failure due to red oxidation.

NICKEL – PLATED CHAIN

Diamond Chain produces a full line of nickel-plated roller chains for a variety of uses in environments where the chains are exposed to moisture. Common uses include applications exposed to the weather, high humidity, or those on machines that are frequently washed down with water.

Diamond nickel-plated chain provides superior protection from the elements, greatly extending the life of the base chain when operating in wet conditions. Each individual component of Diamond nickel-plated chain is plated before assembly to ensure full coverage and plate depth.

SINGLE PITCH DRIVE CHAINS

DIAMOND ACE® CHAIN

The Diamond ACE (anti-corrosion exterior) chain incorporates an electrochemically bonded, protective exterior coating that is applied prior to assembly. Each individual part is treated before assembly using a electrochemical bonding process that provides maximum resistance to iron oxide (red rust) corrosion. Pre-assembly coating ensures all component parts are thoroughly treated, which prevents internal rust from seeping out and causing contamination. Diamond ACE features a zinc-nickel and non-hexavalent chromate coating with a protective lubricant to provide corrosion protection and extended wear resistance. The anti-corrosion exterior is specifically designed to permit sacrificial oxidation of the outer layer, allowing the chain to function without corrosive attack of the base metal.

Independent salt spray and sprocket drive tests have shown that Diamond ACE is superior in balancing corrosion protection and performance.

NOTE: These chains are not intended to resist corrosion from caustic chemicals or acids. Stainless steel chain is recommended for those types of applications. Contact Diamond's application engineers for assistance in selecting the proper chain for your application.

NOTE: For sizes not listed, contact Diamond for availability on a made-to-order basis.

STAINLESS STEEL CHAIN

Diamond produces a wide range of single-pitch and double-pitch stainless steel conveyor chains. These chains are offered in four different stainless steel series to best suit your needs: AP series, 300 series, 400 series, and 600 series.

AP SERIES STAINLESS STEEL CHAIN

These chains are assembled using 300 series link plates, bushings, and rollers along with a precipitation-hardened stainless steel pin. This combination increases the wear life of the chain. AP stainless steel chains are well suited for food processing and are approved by the FDA.

300 SERIES STAINLESS STEEL CHAIN

These chains are assembled using only 300 series components. They have excellent corrosion resistance and very low magnetic permeability. The 300 series chain is a “non-sparking” chain.

400 SERIES STAINLESS STEEL CHAIN

These chains are manufactured using 300 series link plates but have pins, bushings, and rollers that are produced from 400 series heat treated stainless steel. This combination significantly increases wear resistance over those that are constructed using only 300 series stainless steel components.

600 SERIES STAINLESS STEEL CHAIN

These chains are assembled using 300 series link plates with pins, bushings, and rollers made from 600 series precipitation-hardened stainless steel.

*Chains are rollerless -- dimension shown is bushing diameter.

Sapphire extended pitch products are available with a nickel or Rust-Buster finish and in stainless steel.

CORROSION RESISTANCE OF STAINLESS STEEL CHAINS

TR = Total Resistance

SR = Satisfactory Resistance

PR = Partial Resistance

NR = Not Recommended
